

INF.6 (Russia)

PROPOSALS
of the Russian delegation
for UNECE standard on Porcine Meat Carcasses and Cuts

It is necessary to introduce into requirements, specified by the buyer, subsection concerning presence/absence of special treatment of carcasses, half-carcasses and cuts, specifying the preparation and method of its use.

The above information will allow to ensure safety and the trend of usage of salable meat .

Proposed variant:

3.5.7. Anti-microbial treatment

The buyer determines the kind of treatment which may be carried out before or after chilling. It includes physical, chemical and/or biological treatment. In this case various kinds of treatment can be used both separately or in combination with each other, according to the legislation of the importing country. If no such legislation exists, the kind of treatment shall be agreed between the buyer and the seller.

Treatment code	Category	Description
0	Not specified	
1	Without anti-microbial treatment	Anti-microbial treatment not carried out
2	Physical treatment	Treatment by physical method
3	Chemical treatment	Treatment with chemical preparations
4	Biological treatment	Treatment with biological preparations
5	Combination of chemical and/or biological treatment with physical treatment	Treatment with chemical and/or biological preparations and by physical method
6-8	Codes not used	
9	Other
