MetaData

Metadata is data that describes other data. For the eTIR messages MetaData is envelope information which is used on top of every functional message.

For example: who is the sender and recipient of the message, version number, sequence number, preparation date and time, etc.

Core Data Types

- AMOUNT. TYPE
- BINARY OBJECT. TYPE
- CODE. TYPE
- DATE TIME. TYPE
- IDENTIFIER. TYPE
- INDICATOR. TYPE
- MEASURE. TYPE
- NUMERIC. TYPE
- QUANTITY. TYPE
- TEXT. TYPE

Core Data Types attributes

- AMOUNT. TYPE
 - Amount. Content
 - Amount. Currency. Identifier
- BINARY OBJECT. TYPE
 - Binary Object. Content
 - Binary Object. Format. Tekst
 - Binary Object. Mime. Code
 - Binary Object. Encoding. Code
 - Binary Object. Character Set. Code
 - Binary Object. Uniform Resource. Identifier
 - Binary Object. Filename. Text
- CODE. TYPE
 - Code List. Identifier
 - Code List. Agency. Identifier
 - Code List. Agency Name. Text
 - Code List. Name. Tekst
 - Code List. Version. Identifier
 - Code. Name. Tekst
 - Language. Identifier
 - Code List. Uniform Resource. Identifier
 - Code List Scheme. Uniform Resource. Identifier
- DATE TIME. TYPE
 - Date Time. Content
 - Date Time. Format. Text

Core Data Types attributes

- IDENTIFIER. TYPE
 - Identifier. Content
 - Identification Scheme. Identifier
 - Identification Scheme. Name. Tekst
 - Identification Scheme Agency. Identifier
 - Identification Scheme. Agency Name. Text
 - Identification Scheme. Version. Identifier
 - Identification Scheme Data. Uniform Resource
 - Identification Scheme. Uniform Resource. Identifier
- INDICATOR. TYPE
 - Indicator. Content
- MEASURE. TYPE
 - Measure. Content
 - Measure Unit. Code
- NUMERIC. TYPE
 - Numeric. Content
- QUANTITY. TYPE
 - Quantity. Content
 - Quantity Unit. Code
- TEXT. TYPE
 - Text. Content
 - Language. Identifier
