## ECONOMIC COMMISSION FOR EUROPE

## INLAND TRANSPORT COMMITTEE

Working Party on Rail Transport
(Fifty-seventh session, 21-23 October 2003, agenda item 8 (a))

# FACILITATION OF BORDER CROSSING IN INTERNATIONAL RAIL TRANSPORT 

Annual monitoring on the progress made in the facilitation of border crossing in international rail transport

Transmitted by the Governments of Bulgaria, Greece, Hungary, Russian Federation and Turkey

The Working Party on Rail Transport, at its fifty-fifth session (16-18 October 2001), considered, inter alia, questions related to the annual monitoring on the progress made in the facilitation of border crossing in international rail transport (TRANS/SC.2/196, paras. 26-32).

In connection with this item, the Working Party again asked the Governments of those countries where the following border stations are located: Ruse, Kulata, Svilengrad (Bulgaria), Promachon (Greece), Lököshaza (Hungary), Curtici and Giurgiu Nord (Romania), Suzemka (Russian Federation), Kapikule (Turkey) and Zernovo (Ukraine) to submit information referred to in the monitoring system, for the period 7-20 February 2003, (TRANS/SC.2/198, para. 15). The Working Party also asked Governments to provide information distinguishing, among all trains, those with delays and the principal reasons which caused those delays - customs, police controls, railway controls (e.g. lack of traction facilities, locomotives, lack of staff, different working hours, etc) or other types of controls.

The information transmitted to the secretariat is set out in detail below for consideration by the Working Party.

Most of the freight trains come from two directions at the border station Rousse marshalling yard. Here they change their number, due to formation of new trains for the corresponding direction abroad. The newly formed trains start after being accepted by the CFR (it is possible before definite time - as in case table A, column3)

## Direction " $A$ " and " $B$ "

Column 5: the main reason for the excesses is the time consumed by the repeated insertion of data because of the incompatibility of the information systems of the railways (column 8 ) Compared with the previous monitoring in 2002, a significant consolidation could be observed, due to the more productive data insertion of the railways' commercial services and to the elimination of the obstacles under the column "Other causes", namely of the shortage in railway technical service (late supply with locomotives, late implementation of brake control etc). The shortages caused by the incompatibility of the data transfer systems of neighbouring railways still exist, however. Their compatibility will be improved in 2003.
