**Economic Commission for Europe****Inland Transport Committee****Working Party on the Transport of Perishable Foodstuffs****16 October 2012****Sixty-eighth session**

Geneva, 22-25 October 2012

Item 11 of the provisional agenda

**Other business**

---

**ATP product and country profiles****Note by the secretariat**

The secretariat is planning to prepare some profiles of ATP products by country using FAO trade data to try and get a picture of the market in perishable foodstuffs covered by ATP and those not covered by ATP such as fruit and vegetables.

Work has just started on this project and some preliminary tables are presented below. The secretariat would appreciate the advice of members of WP.11 on how to continue with this work.

For example, the secretariat would like to know:

Would this data be useful or of interest to WP.11?

What other aspects would be of interest to WP.11?

Are there other sources of data than FAO?

Would it be of interest to present the imports and exports of the top 5/10 agricultural products for each ATP Contracting Party (in country profiles)?

All comments and observations would be welcome. They can be presented orally during the upcoming meeting of WP.11 under the item other business or by email ([christopher.smith@unece.org](mailto:christopher.smith@unece.org)).

Table XX, Total merchandise exports\* in 2009 (thousands of dollars)

Meat is transported under controlled temperature conditions, either chilled or frozen. Total meat exports were valued at \$10 billion in the United States, while Tajikistan and Uzbekistan did not export meat in 2009. Spain exported more than twice as much meat as it imported and Denmark and Ireland both exported three times more than they imported in 2009. Exports of meat represented a third of total food exports (excluding fish) in Denmark but a small fraction of the same in Morocco.
