UNITED NATIONS CONFERENCE ON TRADE AND DEVELOPMENT

## Global maritime transport developments 2018-2019

Maritime transport sails challenging seas...

MCARD DE T.P.

UNCTAD

### Over four fifths of world merchandise trade by volume was carried by sea in 2018

## However, it lost momentum in 2018

### Slower maritime trade growth

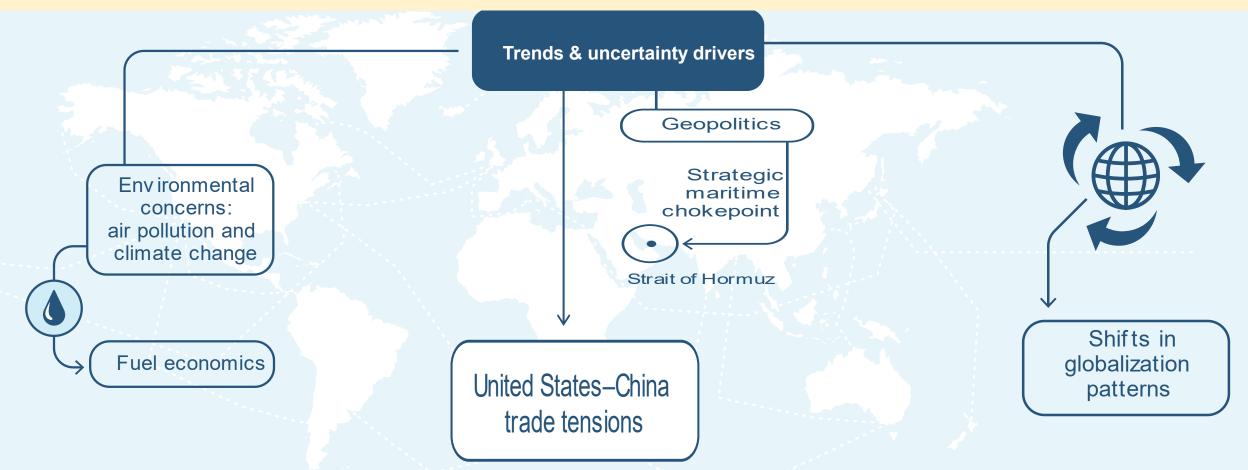

International maritime trade volumes

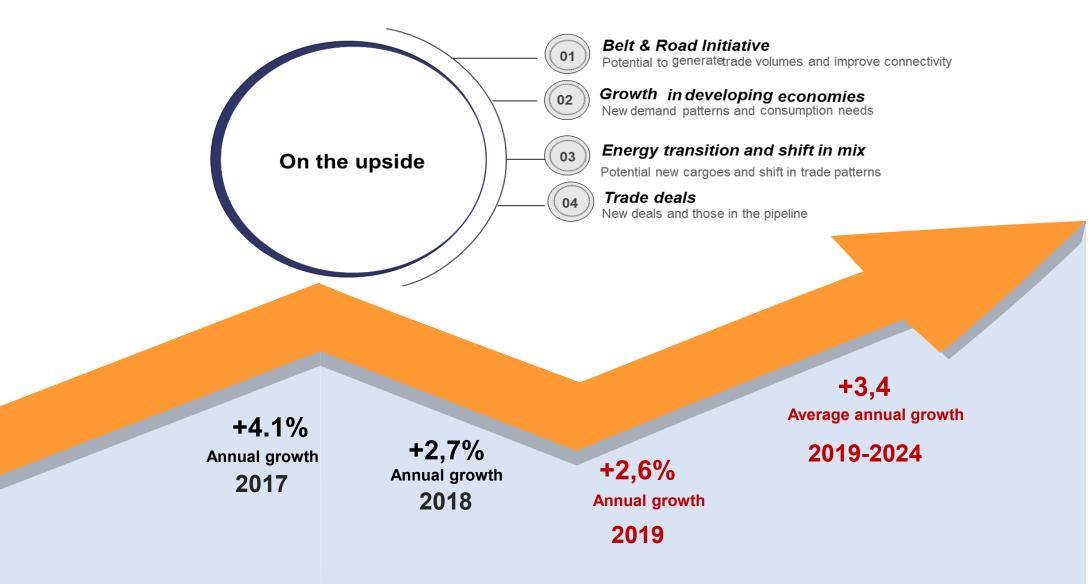

# Drivers of uncertainty are manifold

- Accelerated environmental agenda
- 2020 IMO Sulphur cap and fuel economics
- Climate change impacts and adaptation
- Trade policy crosscurrents
- Geopolitics

- Shifts in globalization patterns
- Trends in China's economy
- Technological disruptions

## Maritime trade projected to grow in 2019-2024 period, amid uncertainty

#### The maritime transport landscape is changing and shifting towards a new normal

The effects of the changing course permeate all aspects of shipping: demand (maritime trade), supply (ships and ports), markets (rates) and the relevant regulatory and legal frameworks

A new normal

Shift in globalization patterns: Regionalization of trade flows & supply chains, greater role of services and technology in manufacturing and production processes

Moderated economic & merchandise trade growth compared with growth rates seen prior to 2009

Changes in China's economy and its role in driving international maritime trade growth

Accelerated environmental agenda, Energy transition and & Climate risks and disruptions to transport networks

**Greater role of next generation technologies** in maritime transport. Scale is not the only driver of value (technologies and intangibles)

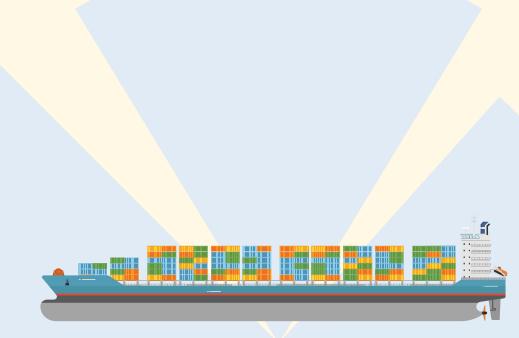

### Greater interlinkages between oceans, climate change and sustainable development

- Reducing global emissions from shipping
  - 4<sup>th</sup> IMO Greenhouse Gas emissions study (2020)
  - IMO strategy on the reduction of GHG from ships
- Climate-risk assessment, adaptation and resilience building of coastal transport infrastructure
  - An emerging policy concern

#### UNCTAD

# A larger role played by technology and services

### Autonomous ships may soon become a reality

- Changes in skills' requirements for jobs
- Potential increase in shore-based jobs and reductions in the number of crew on board vessels
- Requirement for seafarers to have new/different skills and knowledge (safety, efficiency)
- Women may enjoy increased opportunities to pursue a maritime career.

## LINER SHIPPING CONNECTIVITY

- 5 of the top 10 most connected economies are in Asia, 4 are in Europe and 1 is in North America.
- Since 2006, the most connected country – China – has improved its index by 51%.
- The average index increased by 24%.
- The lowest index value recorded in 2019 was below the lowest index value recorded in 2006.
- Growing connectivity divide: least connected countries including several SIDS, saw very little improvement over 2006-2019.
- Countries' geographical position is a given, but connectivity is not.
- Port and shipping operations can improve shipping connectivity by leveraging, for example, digitalization and next generation technologies for efficiency and productivity gains.

#### PORT TURNAROUND TIMES

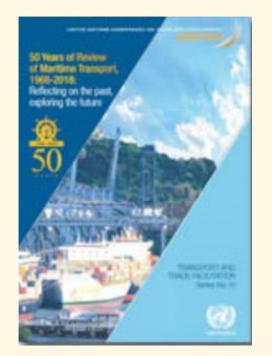

#### World Port Waiting Time, 2018

 Reducing port waiting time may involve a portfolio of measures, including call optimization solutions, trade and transport facilitation, and improved cargo handling services.
