

CZECH REPUBLIC

The Czech Republic since its accession to UNECE Water Convention worked on the implementation of the requirements of the Convention. As the most of them are already anchored in the Czech legal system we take the 20 years of the Convention as a successful story for the Czech Republic.

We see the future as an opportunity to further deepen cooperation with other Parties to the Convention on border waters as well as in international river basins. In the context of opening the Convention to non-UNECE member states we see our role as a skilled player in this field of international cooperation that is ready to share the experiences with the new members of the Water Convention family.
