Collaborative Compilers Hub for the Statistical
Community

UNECE: Meeting of the Group of Experts on National Accounts
May 17, 2021

James Tebrake
Assistant Director
IMF Statistics Department

Outline

- Objective of the Compilers Hub
- Project Development Stages
- Structure of the Compilers Hub

Designs and features are based on 'blue sky thinking'. Not all features will make it into the first release of the final product.

Compilers Hub: Project Goal

Design and develop a digital solution for the national accounts, balance of payments and government finance statistical compilers community that would allow them to:

- Centralize and share knowledge
- Engage in global collaboration and discourse
- Convene topical conversations

Compilers Hub: Project Development Stages

Compilers Hub: Project Stage

1 ✓ Participatory design sessions

Engaged internal stakeholders and partners from other IOs and NSOs to translate their vision into features and requirements that work together in a unified hub.

- 5 virtual whiteboarding sessions held in Mural
- 60-90 minutes each

2 ✓ Information architecture testing

Conducted with users to gather feedback on content priority and investigate mental models for categorization.

- 500 participants engaged
- 120+ completed responses

3 ✓ Series of global interviews

Held with end users to investigate actual needs and behaviors — both validating and correcting previous assumption-based personas.

- 14 Interviews
- 45 Minutes Each
- 13 Countries
- 4 Statistical Domains

Compilers Hub: Project Stage

5

(In Progress)

6

Low-fidelity wireframes

Mock-ups created considering the user research and stakeholder needs.

Designs are based on 'blue sky thinking' – they are conceptual. Not all features will make it to the production

IT feasibility assessment

IMF will assess which features are feasible (at least at launch).

This will determine the design of the high-fidelity wireframes

Production

IMF will start implementing the high-fidelity wireframes.

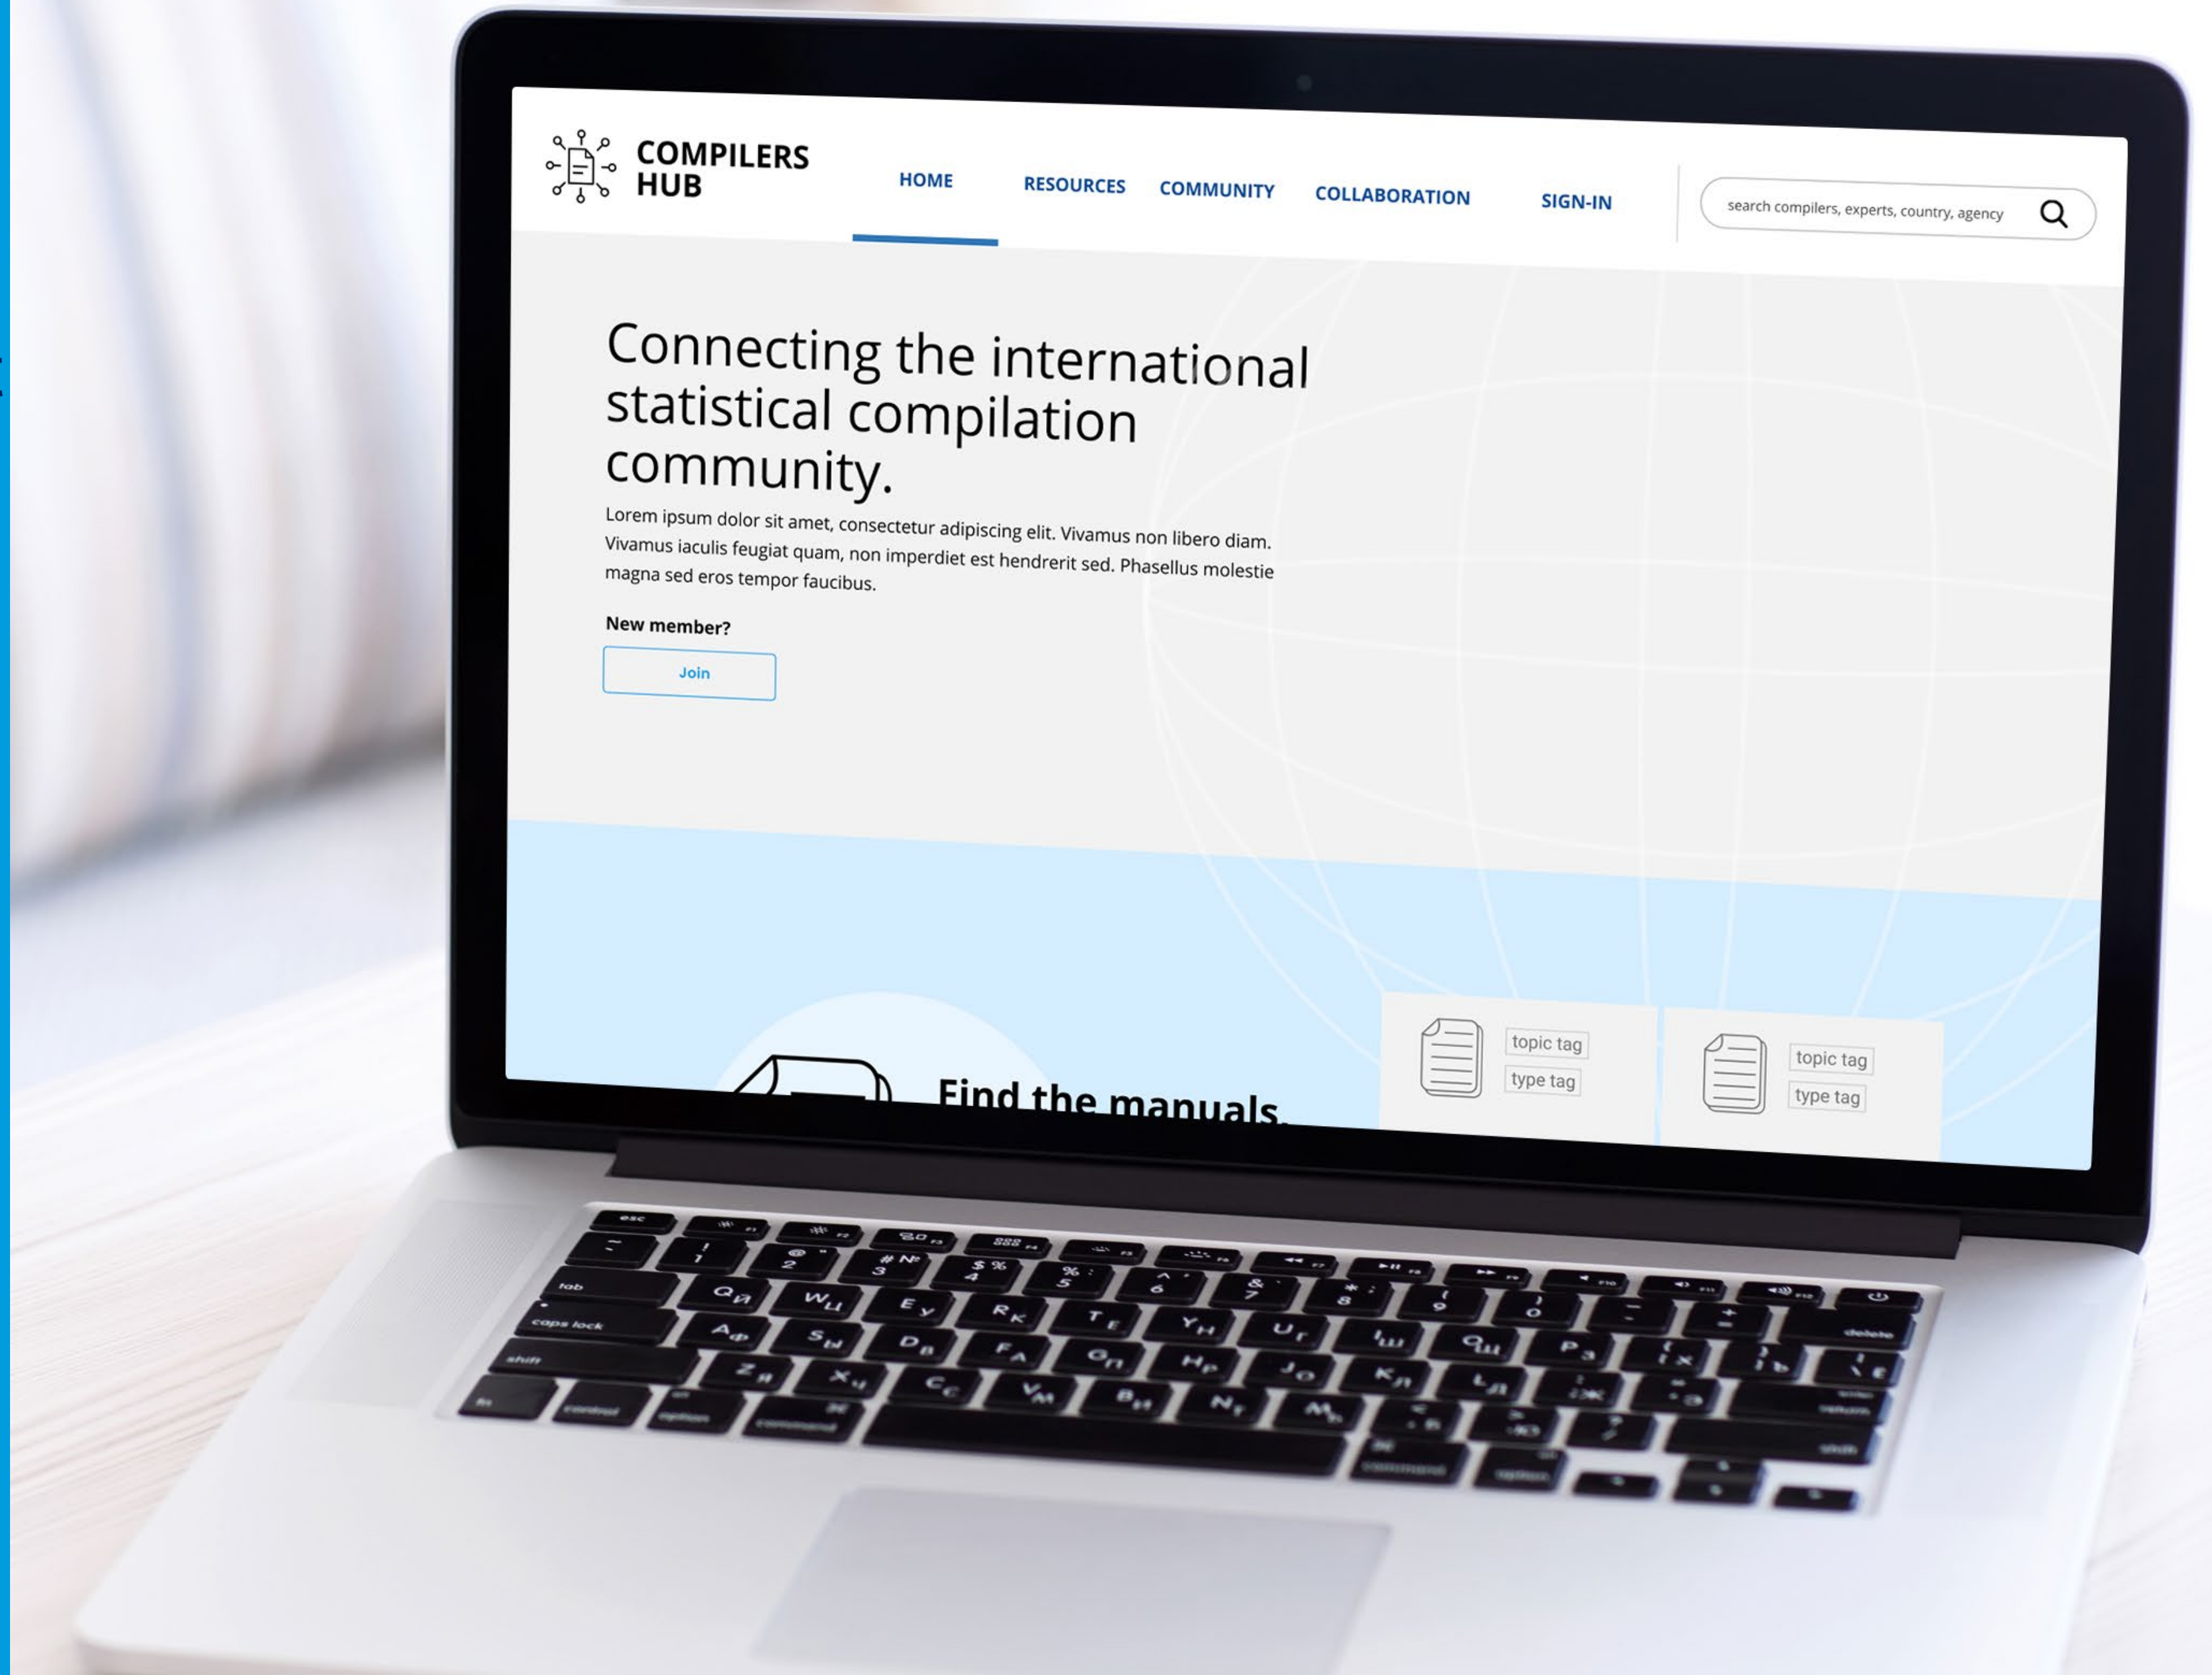

Overview of Compilers Hub: Current Structure

“Structure” of the Hub

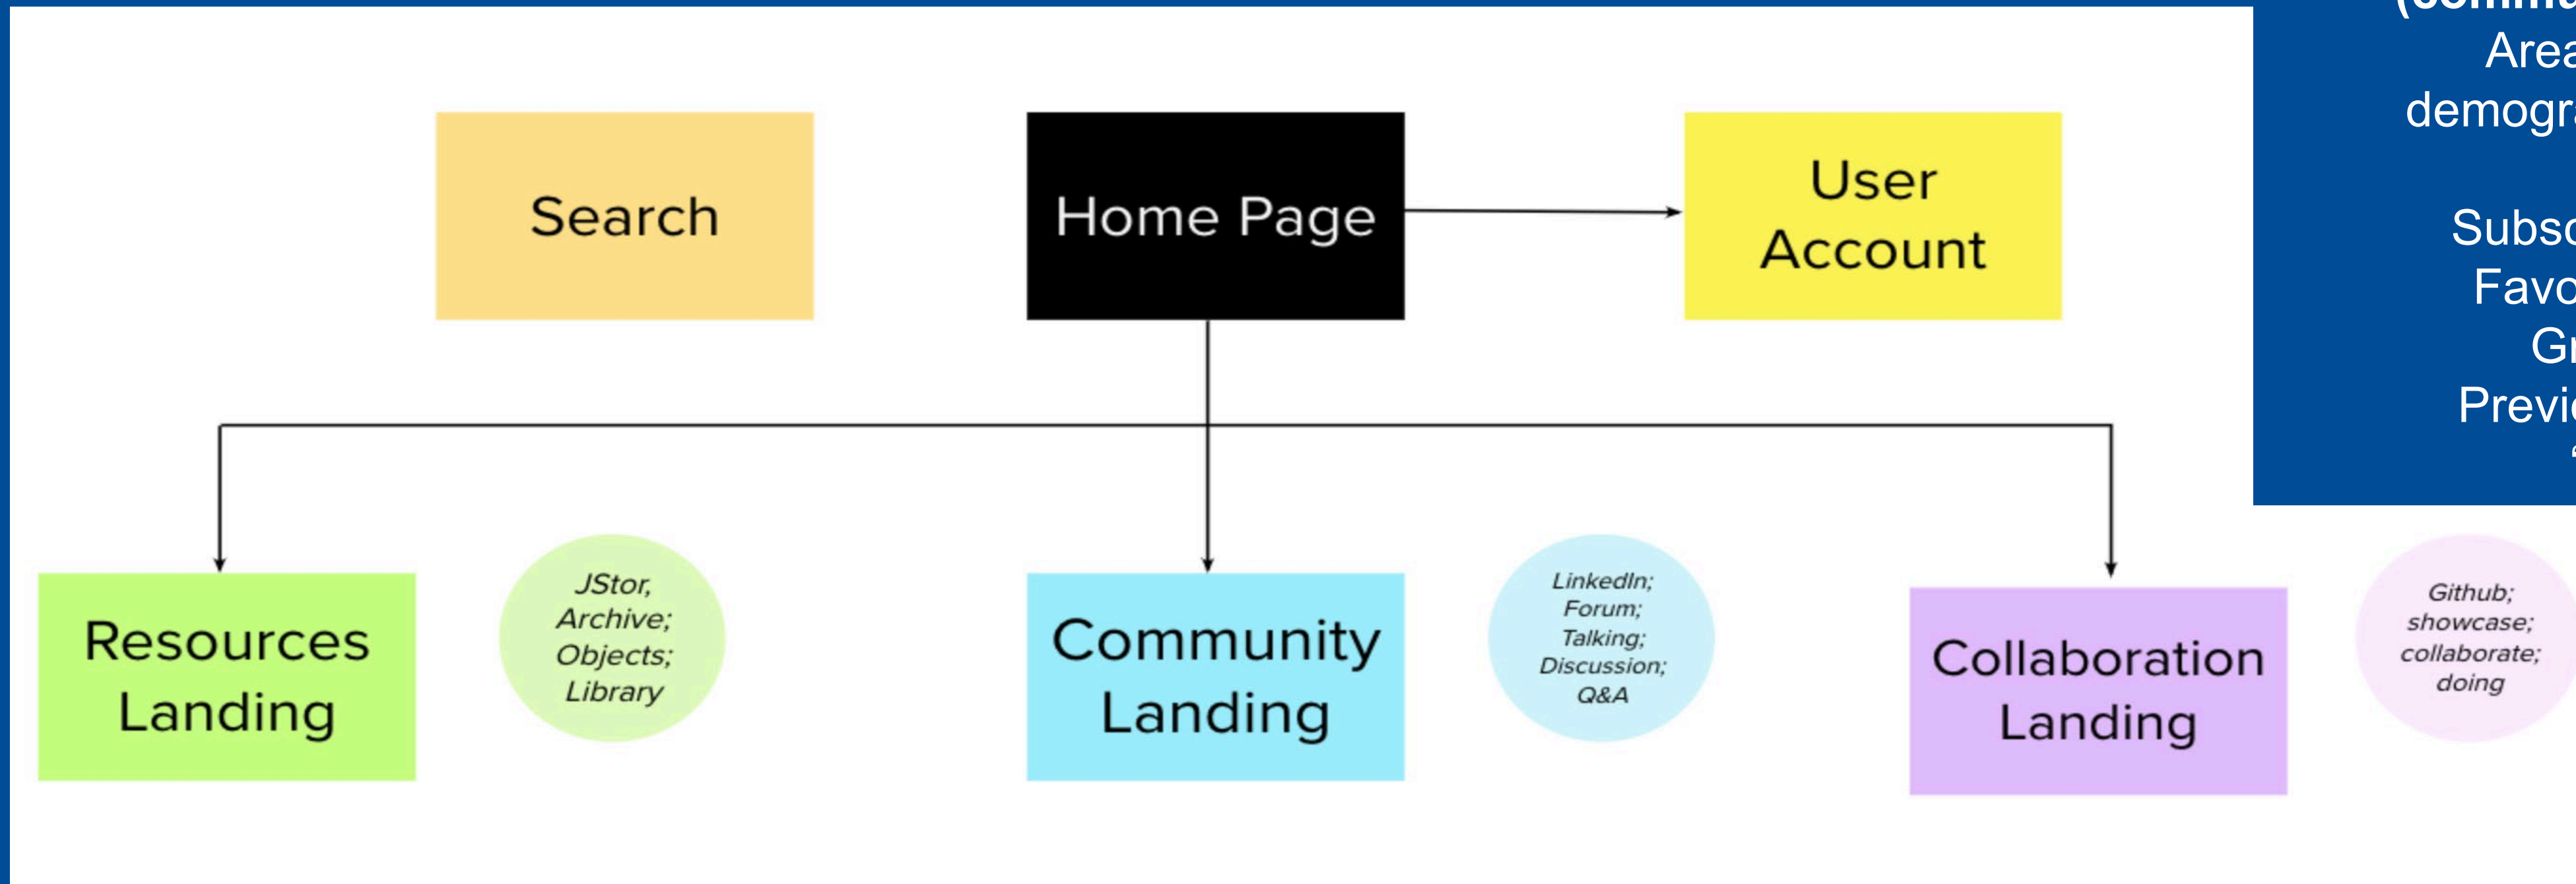

➤ User research revealed that the target audiences’ needs can be classified in three distinct buckets:

- ✓ *Resources*
- ✓ *Community*
- ✓ *Collaboration*

➤ Information architecture was structured around these needs, and it reflects the users’ mental model.

Compilers Hub: Overview of Site Structure

Profile maintenance: Key to participate in core intention of site (community / collaboration)
 Areas/years of experience, demographics, publications, skills, interests, etc.
 Subscriptions / following
 Favorites / bookmarks
 Group affiliations
 Previous activity on site
 “My Projects”

Log-in not required to view resources
 Manuals
 Working Papers
 Training Resources
 Seminar Recordings
 Completed Projects
Each resource paired with cross-links to related discussions or collaborations (citing the resource)

Log-in required to participate
 Discussion boards
 Open and closed channel groups
 Institution accounts
Discussion threads can cite projects or resources already on the site

Log-in required to view and participate - potential for integration with GitHub functionality
 Showcase completed projects
 CTAs for consultations, co-development, co-authoring, calls for feedback, etc.
 “My Projects”

Hub Resources

- In this section users will be able to find manuals, links to conferences and training materials, and information on **‘tools’** such as ‘R Programming’, ‘SBR’, ‘Stata’ and Excel templates.
- All resources will be tagged with the domains and topics to which they relate, making it easy for users to filter and access the information they need quickly.

The screenshot shows the COMPILERS HUB website interface. At the top, there is a navigation bar with links for HOME, RESOURCES, COMMUNITY, COLLABORATION, and MY ACCOUNT, along with a search bar. Below the navigation is a hero section featuring a magnifying glass over a document and a 'LATEST PUBLICATION' card for the 'Manual on Government Deficit and Debt - Implementation of ESA 2019 Edition' with a 'View the Report' button. A left sidebar contains a filter menu with categories: Demographic and social statistics (with sub-items like Population and migration, Labour, Education, Health, Income and consumption, Social protection, Human settlements and housing, Justice and crime, Culture, and Political and other community activities), Economic statistics, and Environment and multi-domain statistics. The main content area is divided into four sections: 'Manuals based on your main domains' (with a 'See all' button), 'Conferences you might be interested in' (with a 'See all' button), 'Trainings to further your skill set' (with a 'See all' button), and 'Compilation tools that can streamline your process' (listing R Programming, SBR, Excel Templates, and Stata).

Users can filter the content by domains and topics.

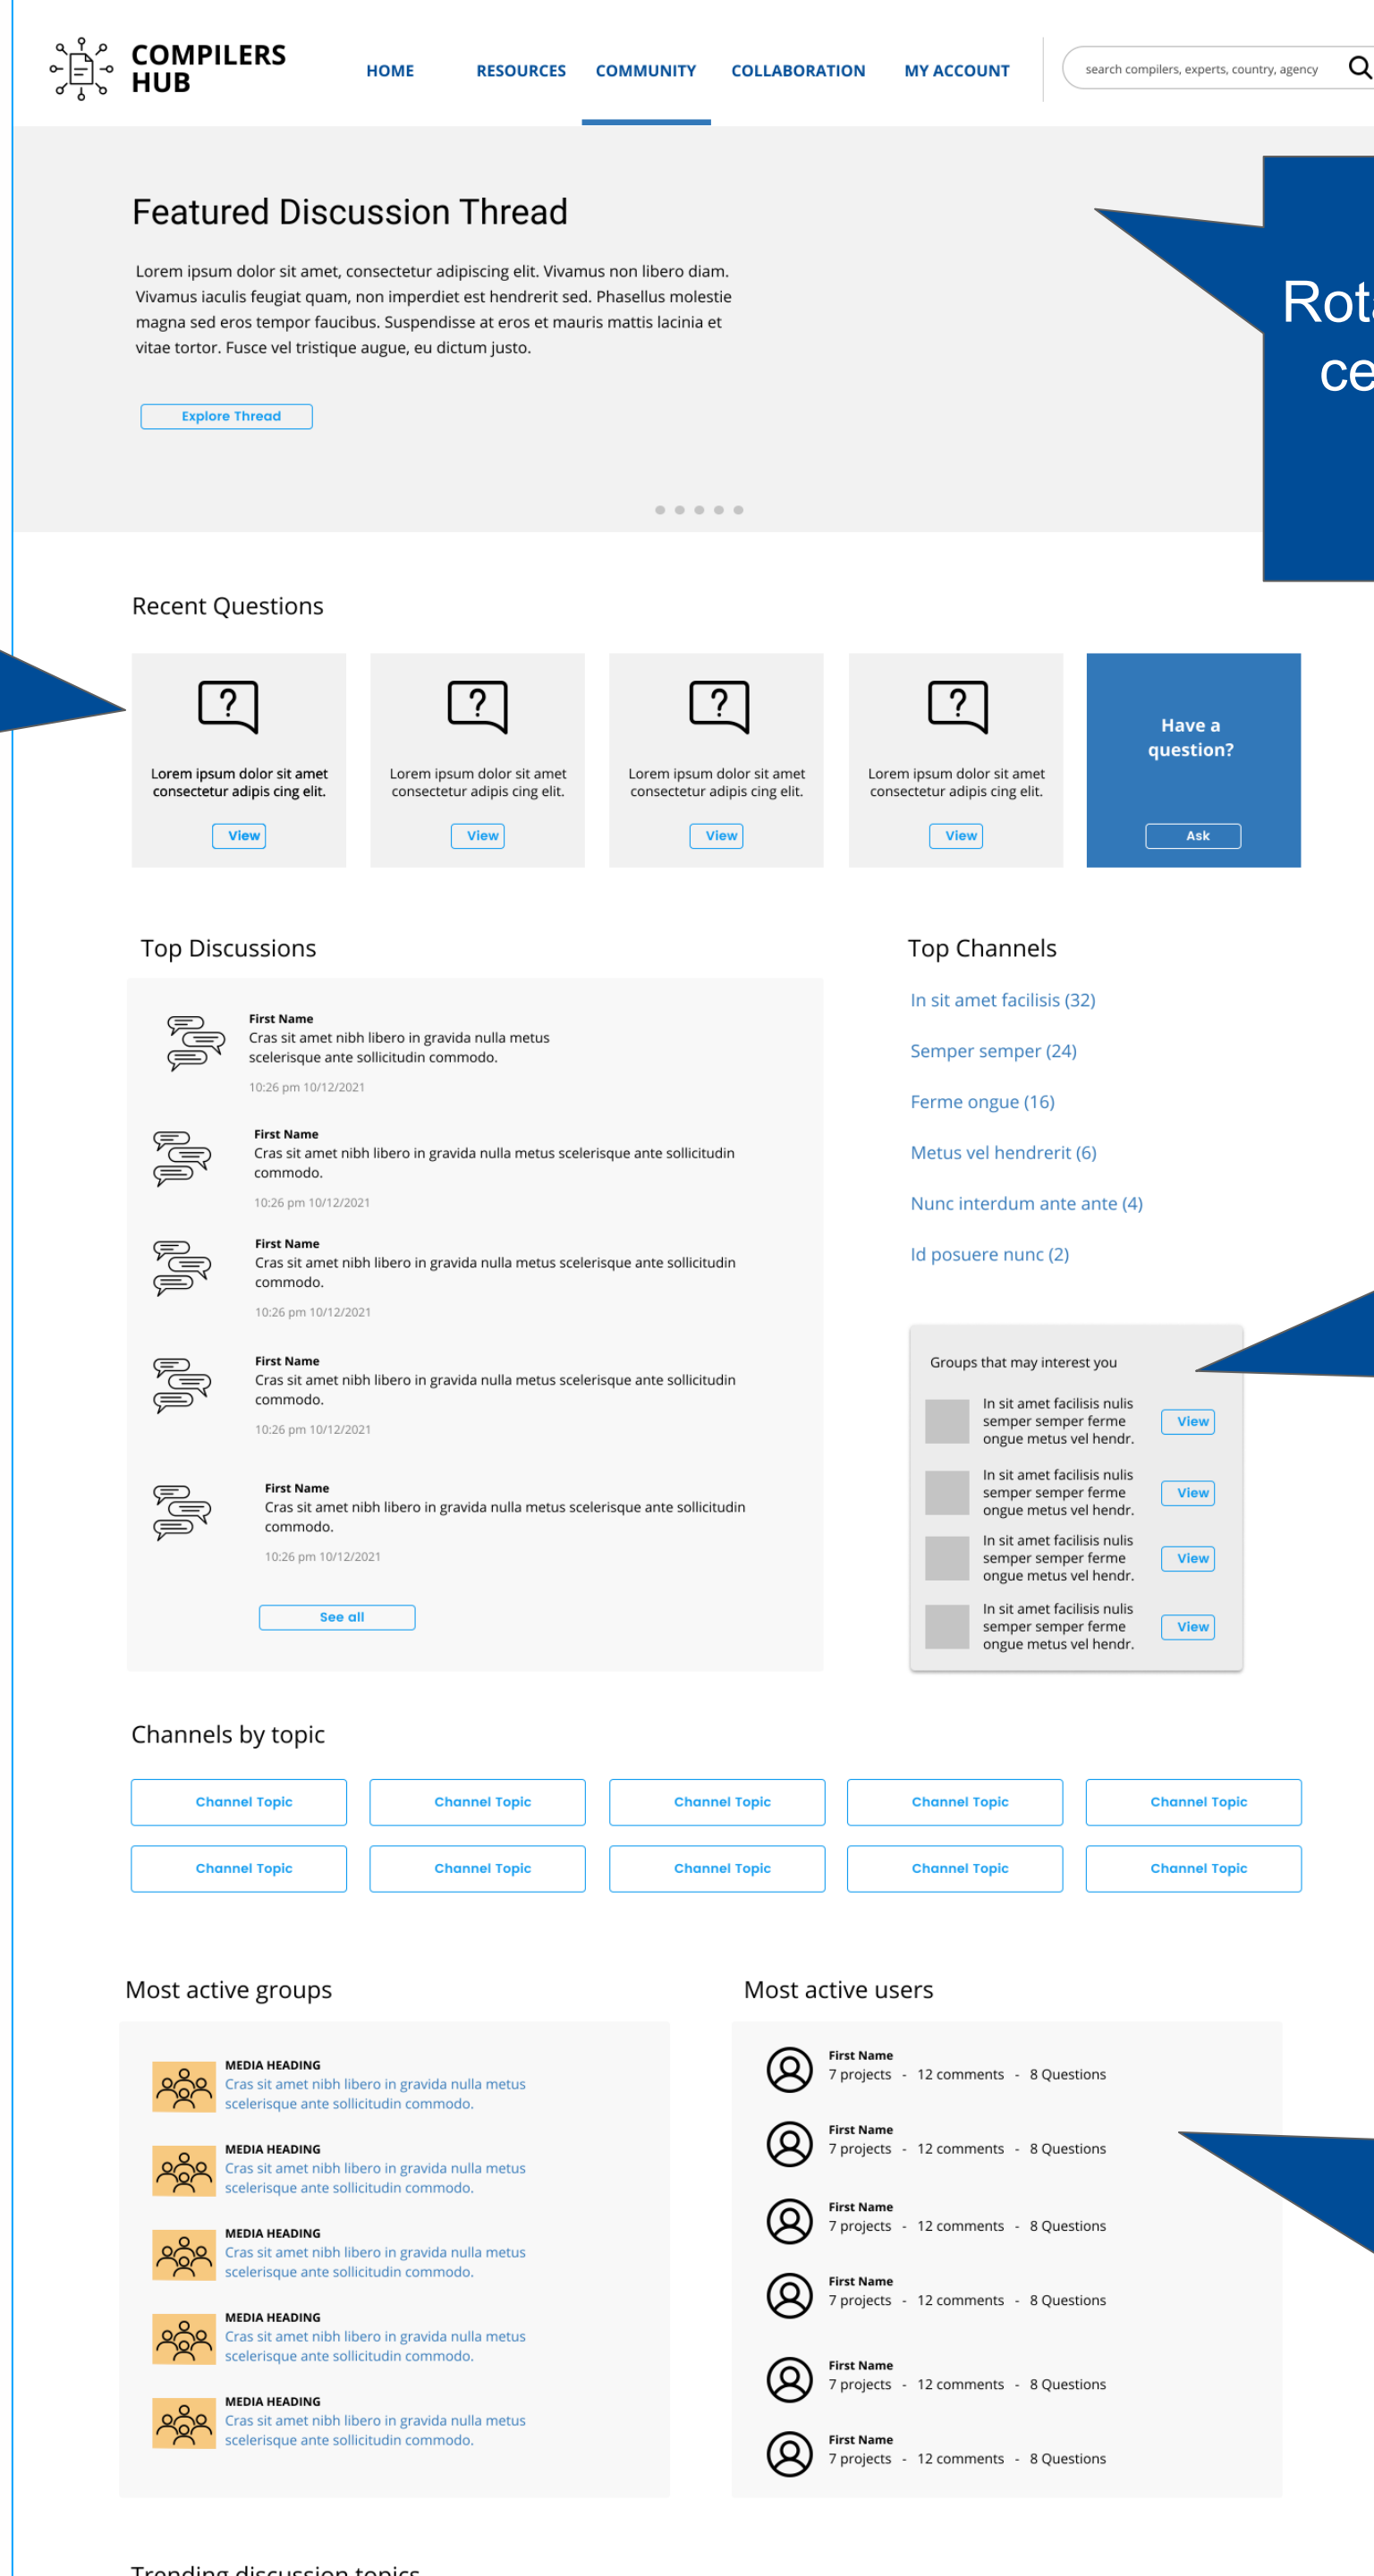

Rotator that enables selected resources to be featured.

Resources are classified in four main areas: Manuals, Conferences, Trainings and Compilation Tools.

Based on the user's domains and topics, relevant content will be positioned at the front.

Community

- Users will have the opportunity to interact with other compilers and expand their networks.
- They can join existing groups or create new ones; participate in discussions; and post the questions that they might have.

Most recent questions will be highlighted to give experts more visibility of the less experienced users who need help.

Rotator that enables certain content to be featured.

Groups that might be of interest based on the domains and topics of the user.

To encourage community/collaboration, users who participate most in conversations and in answering questions will be featured.

Collaboration

- One of the most sophisticated features of the hub is to give the users the ability to **collaborate on projects**.
- In this sense, it is like *GitHub* where users can co-develop a compilation tool, host the files, manage version control and distribution.

Completed Projects Showcase

Projects By Type

- In sit amet facilisis (32)
- Semper semper (24)
- Ferme ongue (16)
- Metus vel hendrerit (6)
- Nunc interdum ante ante (4)
- Id posuere nunc (2)

Users can collaborate on co-development such as writing 'R' programs, authoring documents, collating feedback on a completed project, and getting consultations on an ongoing project.

Have an idea for a project?

Start One

Users can also start a new project to collaborate with other compilers.

User Profile

- On the profile pages, users can get detailed information on other users' backgrounds, expertise and their contributions to projects that are being developed on the hub.
- Users can also use this as a landing page for quick access to the documents that they have saved.

In addition to the institution for which the user works, they can also indicate their statistical domain.

Users' profiles will automatically be populated with any content that they have authored.

When their work is cited in other articles, the article will appear here.

Users can message others on the platform directly. They can also provide a link to their LinkedIn profiles.

Their most recent posts will be listed on the user's profile page, making it easy to keep track of their contributions.
