

# The energy transition in a nutshell

# Feasibility study of a UK-based UN International Centre of Excellence in Sustainable Resource Management

- Focus on critical minerals to support the global development and implementation of UNFC/UNRMS guidelines and best practices.
- Support the global implementation of UNFC/UNRMS guidelines and provide initial scoping for the functions of UN International Centre of Excellence in Sustainable Resource Management.
- The deliverables:
  - Contribute to internationally acceptable UN-backed guidelines for recording of resources to support sustainable production of technology-critical minerals and metals
  - Support dissemination and uptake internationally of such UN guidelines.

# Feasibility study of a UK-based UN International Centre of Excellence in Sustainable Resource Management

- Work plan
  - Dialogue with UNECE and UK government
  - Literature review
  - Gap analysis
  - Recommendations for internationally acceptable UN-backed guidelines
  - Development of a continuing long-term engagement strategy
