

## The eTIR International System

The Contracting Parties to the TIR Convention launched in 2003 the so-called “eTIR Project”, aimed at providing an exchange platform for all actors (Customs authorities, holders and guarantee chains) involved in the TIR system, known as the “eTIR international system” (Customs to Customs).

The eTIR international system aims to ensure the secure exchange of data between national Customs systems related to the international transit of goods, vehicles or containers according to the provisions of the TIR Convention and to allow Customs to manage the data on guarantees, issued by guarantee chains to holders authorized to use the TIR system.
