

## **Proposal for amendments to the ‘specifications and application guidelines for the Unique Identifier (UI) module’, document ECE/TRANS/WP.29/2019/77**

This document was produced by the Informal Working Group on DETA at its 42th session on request of WP.29 at its 184<sup>th</sup> session as set out in report ECE/TRANS/WP.29/1159, para. 93.

### **Proposal**

*Part II. B. Paragraph 5. first sentence*, amend to read:

- "5. For the purpose of Unique Identifier, a product is a physical object, or a group of physical objects consisting of one or more approved systems, components, equipment or parts and is identified ~~by a single type approval number or~~ by a unique combination of **Sections 1 and 3, plus the UN Regulation number specified in Section 2 of the** type approval number(s), as is typically for lamp units."

### **Justification**

The original text refers to the complete type approval number, including Section 2 indicating the series of amendments. However, as specified in Annex I Item 5, in case of an amendment and when the product is not modified and already complies with the new series of amendments, the UI will not change. Therefore, Paragraph 5 needs to be amended to clarify the ‘product definition’ in a way that it will refer to only the UN Regulation number as part of Section 2 but not to the series of amendments as part of this Section 2.

(Note: the numbering of type approvals is set out in Schedule 4 to the 1958 Agreement Revision 3).
