

OICA position on HD Battery Durability GTR

OICA Position

- LD battery durability GTR provides a good structure and base for development of HD battery durability requirement.
- Many approaches could also be applied for HD, e. g. multiple steps of GTR, applying different family definitions for monitoring and for durability requirement, respectively.
- However, we see the need of a GTR specific for HD, i. e. from the vehicle scope of the GTR, monitor/Indicator requirement, family definitions, to verification method, almost all the contents need to be redefined.
- The GTR targeted vehicles are mostly under development, which needs to be taken into consideration.
- OICA has organized HD TF battery durability group to support EVE WG.
- OICA would like to urge EVE WG to set a roadmap for HD GTR work.
