COMMENTS ON GRVA-11-03

How to address AI at UNECE may become a very complex task and needs to be addressed in a pragmatic manner.

It is difficult to review and approve the document without having a clear scope. It is suggested to split this document into 3 consecutive work items:

1. Collection inputs and reports from stakeholders (complete).

2. Agreement on common definitions e.g. artificial Intelligence, probabilistic algorithms and Self-learning (development vs in-use).

3. Draft TOR / Initial outline / draft guidance document (detailed discussion within ITS).

The proposal for a way forward within GRVA (clause V) can be discussed during point 3. Recommend to agree on definitions within a SIG / TF before GRAV-13.
