World Forum for Harmonization of Vehicle Regulations

186th session

Geneva, 8-11 March 2022 Item 4.8.6 of the provisional agenda 1958 Agreement: Consideration of draft amendments to existing UN Regulations submitted by GRSG

Proposal for supplement 1 to 01 Series of amendments to UN Regulation No. 160

Submitted by the Working Party on General Safety Provisions *

The text reproduced below was adopted by the Working Party on General Safety Provisions (GRSG) at its 122nd session (ECE/TRANS/WP.29/GRSG/101, para. 109). It is based on ECE/TRANS/WP.29/GRSG/2021/34 and Informal document GRSG-122-37. It is submitted to the World Forum for Harmonization of Vehicle Regulations (WP.29) and to the Administrative Committee (AC.1) for consideration at their March 2022 sessions.

^{*} In accordance with the programme of work of the Inland Transport Committee for 2022 as outlined in proposed programme budget for 2022 (A/76/6 (part V sect. 20) para 20.76), the World Forum will develop, harmonize and update UN Regulations in order to enhance the performance of vehicles. The present document is submitted in conformity with that mandate.

Paragraph 1.3., amend to read:

"1.3. The following data elements are excluded from the scope: VIN, associated vehicle details, location/positioning data, information of the driver, date and time of an event."

Paragraph 2. Insert new paragraphs 2.2 – 2.4, 2.6 – 2.11, 2.13, 2.17, 2.23, 2.28, 2.42, 2.61 to read:

- 2.2. "Accident Emergency Call System" means a system that is activated either automatically via in-vehicle sensors or manually, which carries, by means of public mobile wireless communications networks, a set of crash-related data and establishes an emergency audio channel between the occupants of the vehicle and an answering point.
- 2.3. "Adaptive cruise control" is a system which accelerates or decelerates the vehicle to automatically maintain a driver pre-set speed and driver pre-set gap distance from the vehicle in front.
- 2.4. "Advanced emergency braking system status" means the operating status of a system which can automatically detect an imminent forward collision and activate the vehicle braking system to decelerate the vehicle with the purpose of avoiding or mitigating a collision.
- 2.6. "Automatically commanded steering function category A" means a function within an electronic control system where actuation of the steering system can result from automatic evaluation of signals initiated on-board the vehicle, possibly in conjunction with passive infrastructure features, to generate control action in order to assist the driver in low speed or parking manoeuvring.
- 2.7. "Automatically commanded steering function category B1" means a function within an electronic control system where actuation of the steering system can result from automatic evaluation of signals initiated on-board the vehicle, possibly in conjunction with passive infrastructure features, to generate control action in order to assist the driver in keeping the vehicle within the chosen lane by influencing the lateral movement of the vehicle.
- 2.8. "Automatically commanded steering function category B2" means a function within an electronic control system where actuation of the steering system can result from automatic evaluation of signals initiated on-board the vehicle, possibly in conjunction with passive infrastructure features, to generate control action in order to keep the vehicle within its lane by influencing the lateral movement of the vehicle for extended periods without further driver command/confirmation.
- 2.9. "Automatically commanded steering function category C" means a function within an electronic control system where actuation of the steering system can result from automatic evaluation of signals initiated on-board the vehicle, possibly in conjunction with passive infrastructure features, to generate control action in order to perform a single lateral manoeuvre (e.g. lane change) when commanded by the driver.
- 2.10. "Automatically commanded steering function category D" means a function within an electronic control system where actuation of the steering system can result from automatic evaluation of signals initiated on-board the vehicle, possibly in conjunction with passive infrastructure features, to generate control action in order to indicate the possibility of a single lateral manoeuvre (e.g. lane change) but perform that function only following a confirmation by the driver.
- 2.11. "Automatically commanded steering function category E" means a function within an electronic control system where actuation of the steering system can result from automatic evaluation of signals initiated on-board the vehicle, possibly in conjunction with passive infrastructure features, to generate control action in order to continuously determine the possibility of a manoeuvre (e.g. lane change) and complete these manoeuvres for extended periods without further driver command/confirmation.

- 2.13. "Corrective steering function" means a control function within an electronic control system whereby, for a limited duration, changes to the steering angle of one or more wheels may result from the automatic evaluation of signals initiated on-board the vehicle, in order to compensate a sudden, unexpected change in the side force of the vehicle, improve the vehicle stability (e.g. side wind, differing adhesion road conditions "µ-split"), or correct lane departure (e.g. to avoid crossing lane markings, leaving the road).
- 2.17. "Emergency Steering Function" means a control function which can automatically detect a potential collision and automatically activate the vehicle steering system for a limited duration, to steer the vehicle with the purpose of avoiding or mitigating a collision, with an obstacle obstructing the path of the subject vehicle or when the obstruction of the subject vehicle's path is deemed imminent.
- 2.23. "Far-side impact centre air bag deployment, time to deploy" means the deployment time of an air bag between driver and front seat passenger, relative to Time 0.
- 2.28. "Lane Departure Warning System" means a system to warn the driver of an unintentional drift of the vehicle out of its travel lane.
- 2.42. "Rollover" means any vehicle rotation of 90 degrees or more about any true longitudinal or lateral axis.
- 2.61. "*Tyre Pressure Monitoring System*" means a system fitted on a vehicle, able to perform a function to evaluate the inflation pressure of the tyres or the variation of this inflation pressure over time and to transmit corresponding information to the user while the vehicle is running.

Paragraph, 2.1, 2.26 – 2.27, 2.66, 2.69 – 2.70: amend to read:

- 2.1. "Anti-lock brake system activity" means the anti-lock brake system is actively controlling the vehicle's brakes.
- 2.26. "*Ignition cycle, crash*" means the number (count) of power mode cycles as determined by the EDR ECU at the time when the crash event occurred since the first use of the EDR.
- 2.27. "*Ignition cycle download*" means the number (count) of power mode cycles as determined by the EDR ECU at the time when the data was downloaded since the first use of the EDR.
- 2.66. "X-direction" means in the direction of the vehicle's X-axis, which is parallel to the vehicle's longitudinal centreline. The X-direction is positive in the direction of forward vehicle travel.
- 2.69. "Vehicle roll rate" means the change in angle over time of the vehicle about its X-axis as determined by the sensing system.
- 2.70. "Vehicle yaw rate" means the change in angle over time of the vehicle about its Z-axis as determined by the sensing system."

Paragraphs 2.3. (former) to 2.68., renumber as 2.5. to 2.70., respectively.

Paragraph 5.3.2., amend to read:

"5.3.2. Conditions for triggering locking of data

In the circumstances provided below, the memory for the event shall be locked to prevent any future overwriting of the data by subsequent events."

Annex 4. Table 1, Data elements and format, amend to read:

Table 1

Data element	Condition for requirement ²	Recording interval/time ³ (relative to time zero)	Data sample rate (samples per second)	Minimum range ⁴	Accuracy ⁵	Resolution ⁴	Event(s) recorded for ⁶
Delta-V, longitudinal	Mandatory - not required if longitudinal acceleration recorded at ≥500 Hz with sufficient range and resolution to calculate delta-v with required accuracy	0 to 250 ms or 0 to End of Event Time plus 30 ms, whichever is shorter.	100	-100 km/h to + 100 km/h.	±10%	1 km/h.	Planar
Maximum delta-V, longitudinal	Mandatory - not required if longitudinal acceleration recorded at ≥500 Hz	0–300 ms or 0 to End of Event Time plus 30 ms, whichever is shorter.	N/A	-100 km/h to + 100 km/h.	±10%	1 km/h.	Planar
Time, maximum delta-V, longitudinal	Mandatory - not required if longitudinal acceleration recorded at ≥500 Hz	0–300 ms or 0 to End of Event Time plus 30 ms, whichever is shorter.	N/A	0–300 ms, or 0- End of Event Time plus 30 ms, whichever is shorter.	±3 ms	2.5 ms.	Planar
Speed, vehicle indicated	Mandatory	-5.0 to 0 sec	2	0 km/h to 250 km/h	±1 km/h	1 km/h.	Planar Rollover VRU
Engine throttle, % full (or accelerator pedal, % full)	Mandatory	-5.0 to 0 sec	2	0 to 100%	±5%	1%	Planar Rollover VRU

 $^{^2}$ "Mandatory" is subject to the conditions detailed in Section 1.

³ Pre-crash data and crash data are asynchronous. The sample time accuracy requirement for pre-crash time is -0.1 to 1.0 sec (e.g., T = -1 would need to occur between -1.1 and 0 seconds.)

⁴ For data elements with system states, the term "engaged" also means "actively controlling" or "actively intervening" and "not-engaged" also means "on but not controlling". Likewise, "off" also means "deactivated".

Accuracy requirement only applies within the range of the physical sensor. If measurements captured by a sensor exceed the design range of the sensor, the reported element shall indicate when the measurement first exceeded the design range of the sensor.

⁶ "Planar" includes triggered events in sections 5.3.1.1, 5.3.1.2, and 5.3.1.3 and "VRU" includes triggered events in section 5.3.1.4.
