

## 31st Session Committee on Sustainable Energy ENERGY SECURITY, RESILIENCE AND NET ZERO TANGIBLE ACTIONS TO DELIVER A SUSTAINABLE ENERGY FUTURE 21-23 SEPTEMBER 2022 | PALAIS DES NATIONS | GENEVA

## Agenda Item 4 - 31st Session of the Committee on Sustainable Energy

## Achieving high performance in buildings

21 September 2022, 16:15 - 17:00 CEST (Geneva time)

**Objective:** Review activities aimed to achieve high performance in buildings, implemented by United Nations Economic Commission for Europe (UNECE) in the member States, and to discuss ongoing and future regional cooperation in the area of high-performance buildings.

**Context:** Achieving superior performance in buildings and the built environment contributes to enhanced health and quality of life; improved employment, affordability, social equity, and resilience; reduced carbon intensities, increased clean energy and climate change mitigation; management of water and land resources; mobility and technology access; and facilitates implementation of the 2030 Agenda.

Rather than addressing efficiency on a component-by-component basis, UNECE takes an integrated approach to building design, delivery, and operation, and develops and maintains, through the Group of Experts on Energy Efficiency (GEEE), its principles-based Framework Guidelines for Energy Efficiency Standards in Buildings (the Framework Guidelines, ECE/ENERGY/GE.6/2020/4) with their outcomes-based vision of building performance. To disseminate and deploy the Framework Guidelines, ECE launched High-Performance Buildings Initiative (HPBI) that focuses on capacity development and impact in the field, developing the intellectual, material, and financial resources to educate, advocate and advise for transformation to high performance buildings, and on the outreach required to create a worldwide urban shift to sustainable buildings. The ultimate objective is to improve health and quality of life within the built environment, while simultaneously decarbonizing building-related energy requirements, thus breaking the historic link between improved health, quality of life and atmospheric carbonization.

the area of high performance in buildings and the built environment  16:20 - Report on activities under the High Performance Buildings Initiative - Research and education for the built environment - Development of case studies on application of high-performance buildings principles - Elaborating the outcomes expected of high-performance buildings  16:50 - National plans of UNECE member States  Future work on high performance buildings	
16:50 Buildings Initiative  - Research and education for the built environment  - Development of case studies on application of high-performance buildings principles  - Elaborating the outcomes expected of high-performance buildings  - National plans of UNECE member States  Future work on high performance buildings	or Litvinyuk ecretary, GEEE
- Development of case studies on application of high-performance buildings principles - Elaborating the outcomes expected of high-performance buildings  16:50 - National plans of UNECE member States  Future work on high performance buildings	agomir Tzanev recutive Director, EnEffect entre for Energy Efficiency,
- Elaborating the outcomes expected of high- performance buildings Pe  16:50 - National plans of UNECE member States UN  17:00 Future work on high performance buildings Igo	ther Obonyo (pre-recorded)
17:00 Future work on high performance buildings Igo	obal Building Network enn State University
Future work on high performance buildings Igo	NECE member States
	or Litvinyuk ecretary, GEEE
