

Statistical Data Governance Framework to Achieve Data Interoperability (DAFI)

Extension of the Project for 2023

Workshop on the Modernisation of Official Statistics
22-23 November 2022

Prepared by: Juan Muñoz
INEGI/BSTN/SSG

Reasons to continue with the project...

- The convenience of making use of the invested effort to incept the project, design the structure of the document and refine the scope of the project
- The interest of many statistical organisations, national and international, in the outputs of the project
- Huge compromise of the team members to finish the project
- There is momentum in the creation of contents

What we are going to do in 2023?

- By the first quarter of 2023, we aim to finish the structure and description of the components of the framework
- During the second and third quarters of 2023, we will be working on developing recommendations and guidelines on how to achieve interoperability
- For the last part of 2023, we plan to finish editing the document

Project Outputs

Data Governance
Framework for
Interoperability
(DAFI)

Common Vocabulary with core concepts
related to Data Governance and
Interoperability

A structured set of elements to take decisions
for the transformation of the statistical silos
into a interoperable statistical data and
metadata platform

Recommendations and Guidelines to
Achieve Interoperability

Relations with emergent projects...

- The output of the Project provides a valuable basis for:
 - The transformation of statistical information silos into an interoperable and manageable platform
 - The integration of traditional and emergent data sources
 - The implementation of solid and useful statistical data lakes
 - The building of geo-referenced time series with statistics from different domains
 - The creation of a new generation of statistical services supporting advanced analysis for complex questions and new ways to visualise the facts
- And is a step forward towards a practical use case integrating the standards and models that already exist in the official statistics community

Thank You

Comments, Questions, Any Feedback
