

126th GRSG

Some thoughts about the Unique Identifier

10th – 13th October 2023

Alejandro Checa | Technical Director | a.checa@citainsp.org

The Unique Identifier

The UI replaces traditional approval marking by making the information available on a website with the so-called Summary Document

- + It requires less surface for the engraving**
- It adds additional time and resources to obtain the same information**

Concepts to clarify

- ✓ The UI does not simplify marking, it moves marking away
- ✓ The UI only simplifies the engraving
- ✓ DETA is working without the UI: 46.000 approvals uploaded <https://unece.org/sites/default/files/2023-06/WP.29-190-13e.pdf>. UI to be implemented on top of.
- ✓ The Summary Document is not intended to contain any further information than today's marking

Concepts to clarify

Different markings of the device correspond to a single UI

One UI

Two traditional markings

Summary Document UI 163210	Summary Document UI 163210
<p>UI marking: UI 163210</p> <p>Approval marking:</p> <p>Left-hand mounting: Right-hand mounting:</p> <p>← A H R C F3 1a IB ← A H R C F3 1a IB</p> <p>148R01 30 148R01 30 149R01 (E4) 149R01 (E4) 150R01 PL 150R01 PL 17120</p> <p>Restrictions to the use and/or installation of the device:</p> <p>Maximum installation height of the front position lamp (A) is 750 mm</p> <p>page 1 of 2</p>	<p>Additional information, if any:</p> <p>This device, with a plastic outer lens (PL), contains the functions driving-beam (HR), passing-beam (C), front fog lamp of Class F3 (F3), front direction indicator of category 1a (1a), reflex reflector of Class IB (IB) and a front position lamp (A) with reduced light distribution (as indicated by the vertical arrow).</p> <p>The driving-beam provides a maximum intensity between 123,625 and 145,125 candelas (as indicated by the number 30). The passing-beam fulfils the requirements for right-hand traffic and left-hand traffic (as indicated by the double headed arrow).</p> <p>Due to the photometric restrictions for the front position lamp and the front direction indicator the arrow below the symbols (A, 1a) shall be directed outwards from the vehicle.</p> <p>page 2 of 2</p>

Concepts to clarify

In most lighting devices, engraving is not an issue. There is even a proposal to include brands

Paragraph 5.5.5., amend to read:

"5.5.5. In case of lamps incorporating a ~~manufacturer~~ logo, **the following conditions apply:**

(a) Logos with a size not exceeding 5 cm² are permitted.

(b) Manufacturer logos only, with a size greater than 5 cm² but not exceeding 100 cm² are permitted in the following locations:

on the rear of the vehicle, ~~only~~ two lateral logos (one on each side) or one central logo ~~can be fitted on the rear of the vehicle and/or,~~

on the front of the vehicle, ~~only~~ two lateral logos (one on each side) or one central logo ~~can be fitted on the front of the vehicle.~~

(c) All other logos ~~that are not vehicle manufacturer or body manufacturer logos~~ are prohibited."

How the UI would look like

For vehicle approvals

How the UI would look like

For component approvals in case there is no additional marking (example Reg 45)

Markings not at the same scale

Thank you for your attention!
