## What is conformity assessment?

- Conformity assessment is the process demonstrating whether specified requirements relating to a product, process, service, system, person or body have been fulfilled.
- Such requirements can include performance, safety, efficiency, effectiveness, reliability, durability, or environmental impacts such as pollution or noise.

## What is accreditation?

Accreditation is the independent evaluation of conformity assessment bodies against harmonized standards to carry out specific activities to ensure in particular their integrity, impartiality and competence.

## Accreditation

# European co-operation for Accreditation

BENEFITS OF ACCREDITATION

# THE EUROPEAN ACCREDITATION MODEL

-  Accreditation is a service of public interest
-  A NAB acts as Public Authority
-  CABs shall apply for accreditation to its NAB, in voluntary or mandatory sectors
-  NABs are non-profit organisations
-  No competition between NABs
-  Accreditation is the last level of control in the conformity assessment chain
-  NABs are mandated by their government

# BENEFITS FOR BUSINESSES

---

**Accurate** calibration, measurement, and testing, performed in accordance with best practice, can:

- limit errors and product failure;
- control production costs;
- and contribute to an innovative environment.

**Essential tool** for decision-making, risk management, and supplier selection.

Provides a **competitive advantage** in domestic markets through access to public sector contracts, and also overseas with greater acceptance in export markets.

# BENEFITS FOR GOVERNMENTS AND REGULATORS

- **Enhanced Compliance:** Ensures that products, services, and systems meet regulatory and international standards.
- **Consumer Trust:** Builds public trust in safety and quality of products and services.
- **Sustainable Development:** Supports national and international goals for sustainable development through verified compliance.

[EA Brochure – Accreditation, a tool to support regulators](#)

# How conformity assessment can also test against objectives of the SDGs

**Quality Education (SDG 4) Educational Materials & Services:**  
Certifying educational materials and services to ensure they meet quality and accessibility standards.

**Clean Water and Sanitation (SDG 6) Water Quality Testing:**  
Ensuring water treatment processes and products meet safety and quality standards.

**Affordable and Clean Energy (SDG 7) Renewable Energy Products:** Verifying the efficiency and safety of renewable energy products, like solar panels and wind turbines.

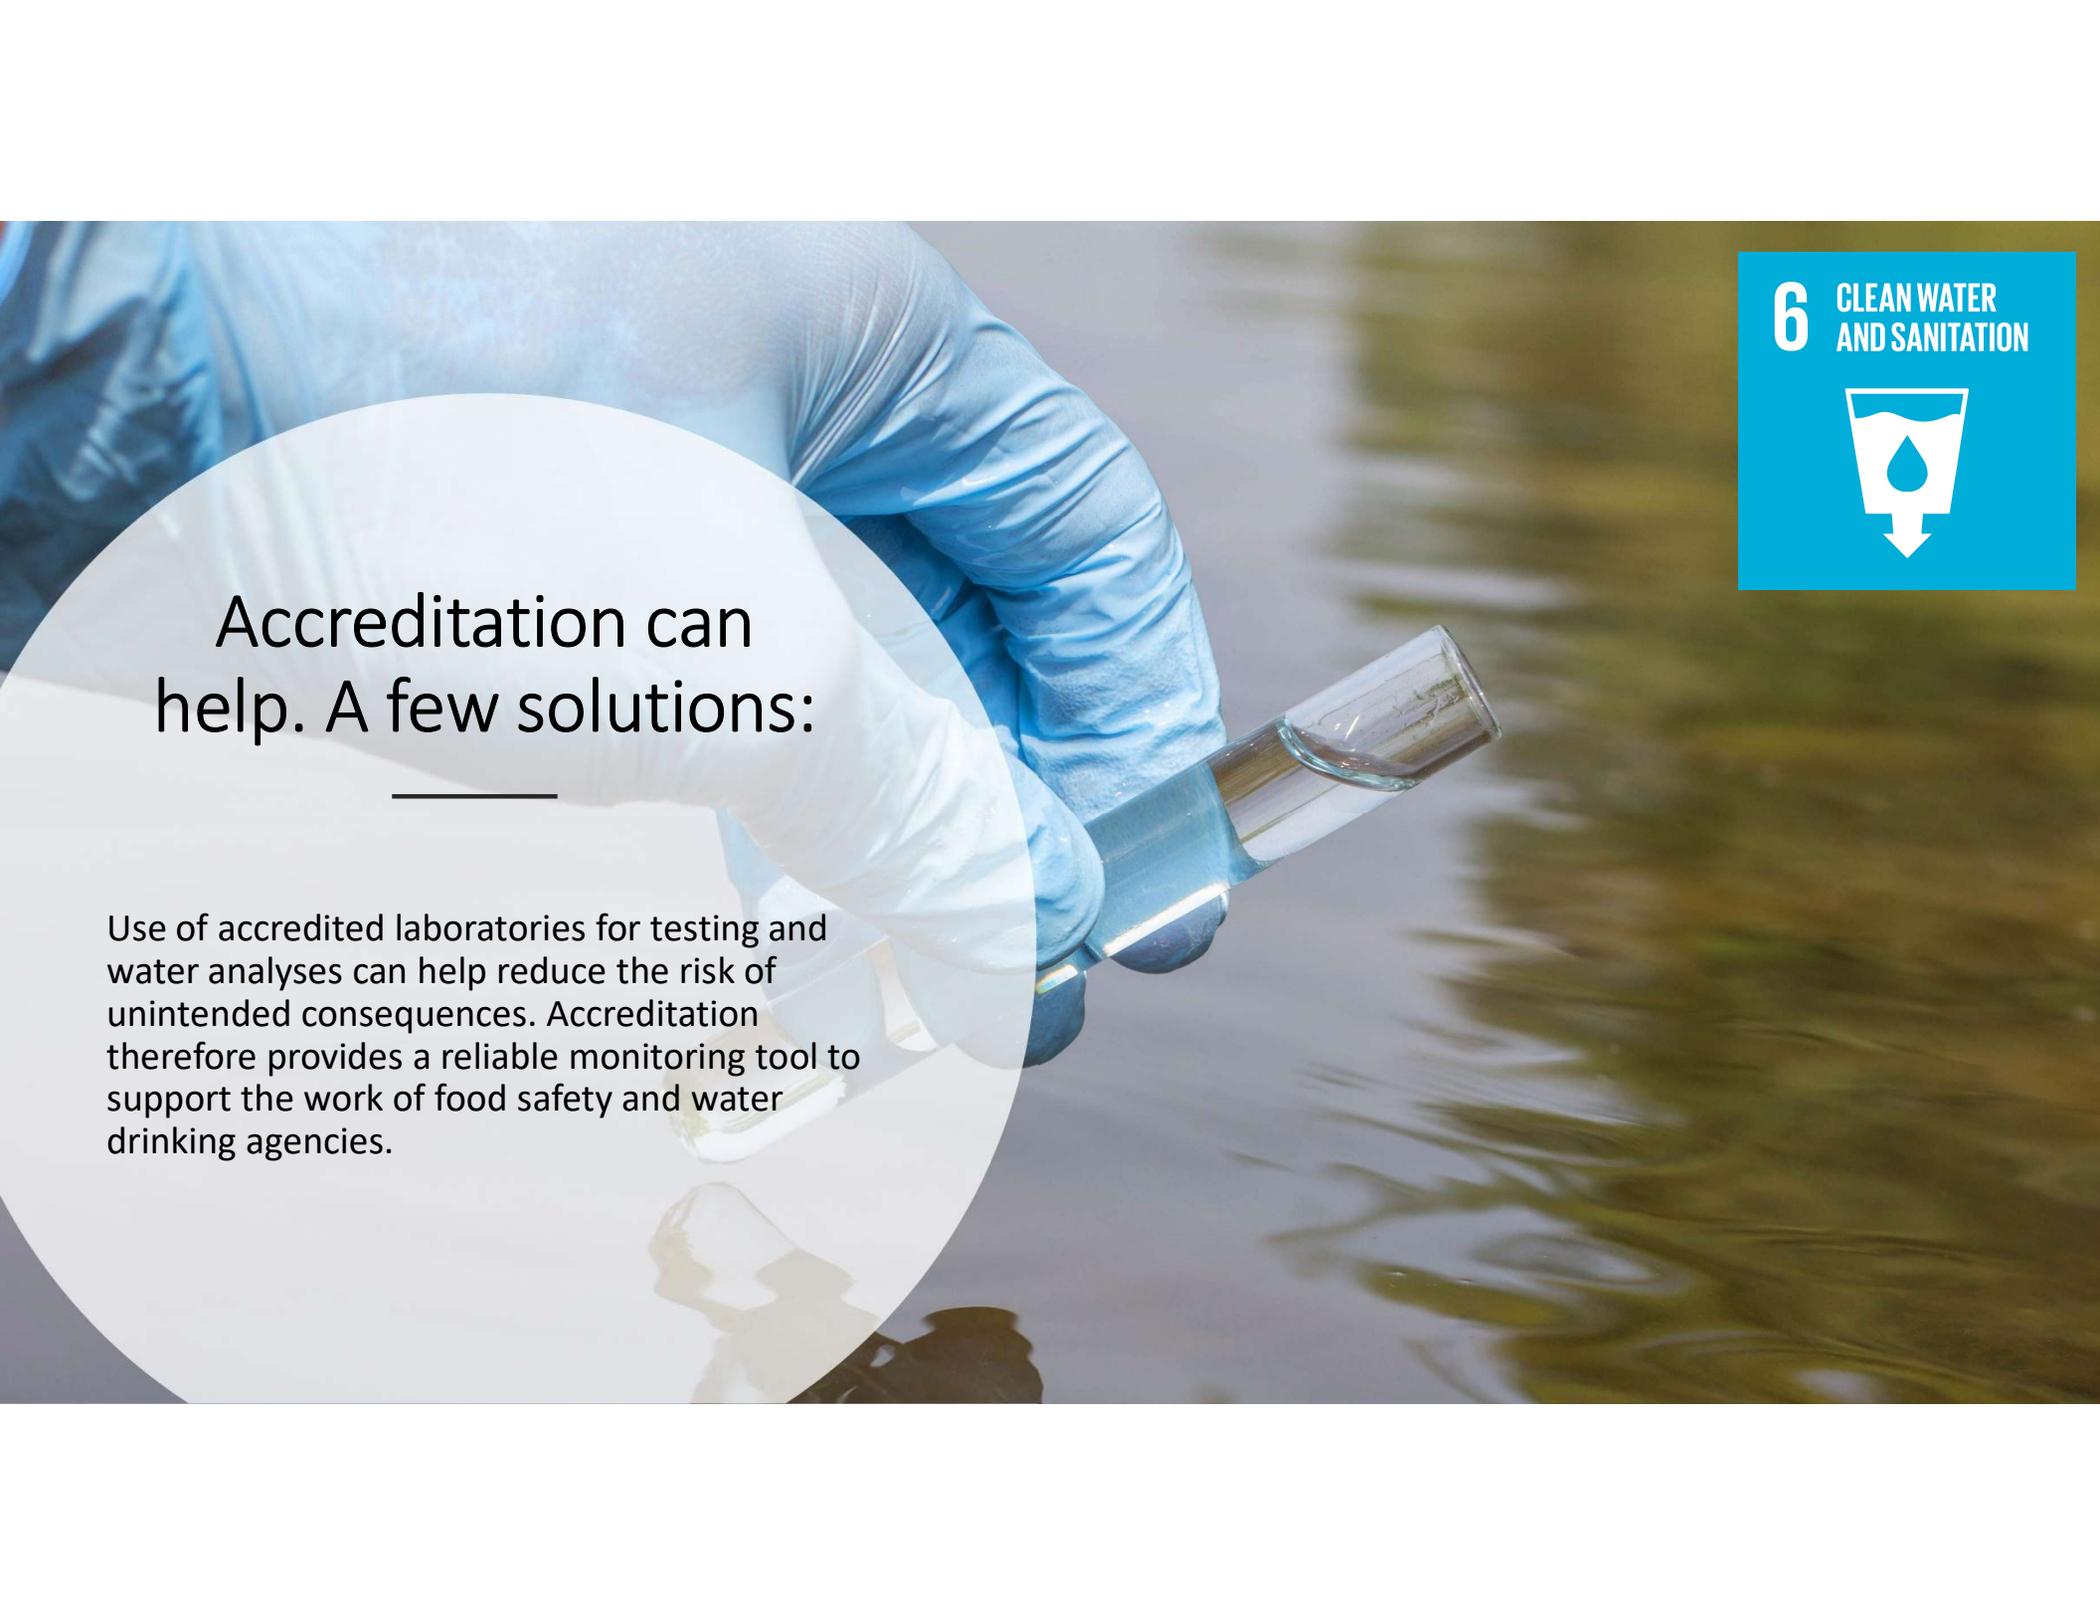

6 CLEAN WATER  
AND SANITATION

## Accreditation can help. A few solutions:

---

Requiring use of accredited labs according to ISO/IEC 17025:2017 standard for analyses of specific microbiological and physico-chemical properties. Analyses of water may include *Escherichia coli* (*E. coli*), *Streptococcus faecalis*, *Pseudomonas aeruginosa*, color, smell, temperature, PH-value, nitrates, ammonia, Iron, Chlorides, residual chlorine etc.

## Accreditation can help. A few solutions:

---

Use of accredited laboratories for testing and water analyses can help reduce the risk of unintended consequences. Accreditation therefore provides a reliable monitoring tool to support the work of food safety and water drinking agencies.

6 CLEAN WATER AND SANITATION

6 CLEAN WATER  
AND SANITATION

## Accreditation can help. A few solutions:

---

Samples, products, services, management systems or personnel can be evaluated against specified requirements by accredited laboratories, certification bodies, and inspection bodies.

# How conformity assessment can also test against objectives of the SDGs

-  **Decent Work and Economic Growth (SDG 8) Workplace Safety Standards:** Assessing compliance with occupational health and safety standards to promote safe working environments.
-  **Industry, Innovation, and Infrastructure (SDG 9) Infrastructure Quality:** Certifying the quality and durability of infrastructure projects, ensuring they meet sustainable construction practices.
-  **Sustainable Cities and Communities (SDG 11) Building Codes:** Ensuring buildings comply with environmental regulations and sustainable practices.

# How conformity assessment can also test against objectives of the SDGs

**Responsible Consumption and Production (SDG 12) Product Certification:** Certifying products for eco-friendliness, recyclability, and minimal environmental impact.

**Climate Action (SDG 13) Environmental Impact Assessments:** Assessing and certifying initiatives aimed at reducing carbon footprints and promoting climate resilience (EU ETS).

**Life Below Water (SDG 14) and Life on Land (SDG 15) Biodiversity Protection:** Certifying practices that protect marine and terrestrial ecosystems from harmful activities.

## EA'S ROLE IN EUROPE

EA's role in **supporting** the effective operation of the **Single Market** is recognised by:

- **Regulation (EC) No 765/2008,**
- the **General Guidelines** for cooperation between EC, EFTA and EA ,
- The **Framework Partnership Agreement** signed with the European Commission and EFTA.

## Regulation (EC) No 765/2008

- Provides the legal framework of accreditation in Europe (EEA)
- Strengthens EA's role in both the voluntary and regulated sectors
- Places an obligation on EU/EFTA Member States to accept results issued by Conformity Assessment Bodies accredited by (EU/EFTA) NABs signatories to the EA MLA

# THE EUROPEAN ACCREDITATION MODEL

-  Accreditation is a service of public interest
-  A NAB acts as Public Authority
-  CABs shall apply for accreditation to its NAB, in voluntary or mandatory sectors
-  NABs are non-profit organisations
-  No competition between NABs
-  Accreditation is the last level of control in the conformity assessment chain
-  NABs are mandated by their government

# CYBERSECURITY

When accreditation can make a difference

The European Commission has adopted the implementing regulation concerning the EU **Cybersecurity Certification Scheme** on Common Criteria (EUCC). It is the first approved scheme under Regulation (EU) 2019/881 (Cybersecurity Act).

The implementing regulation refers to documents known as State-of-the-Art. There will be – inter alia – three SoA documents regarding:

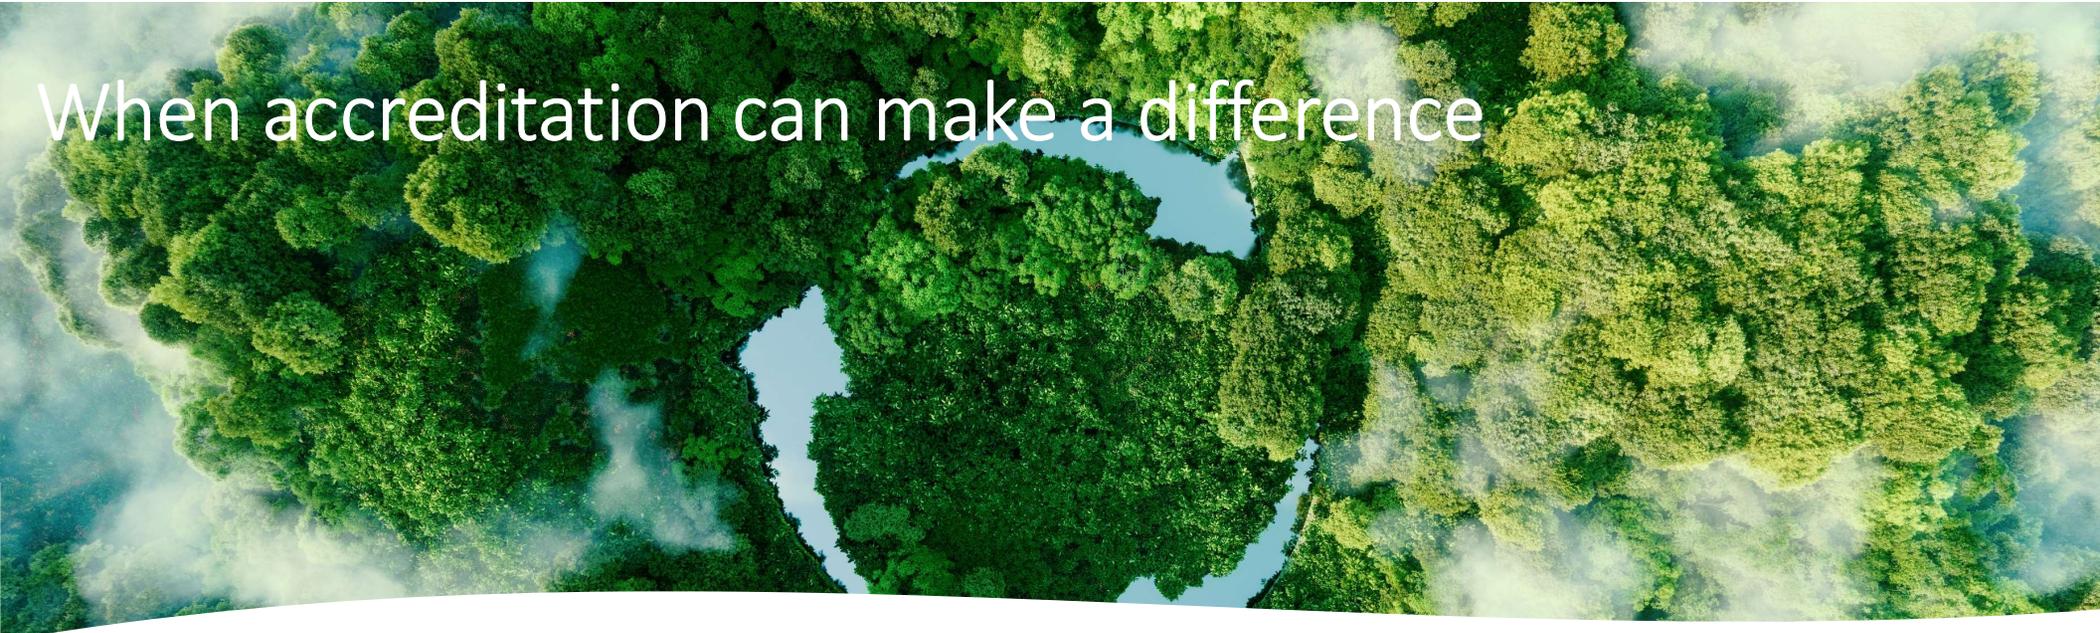

- Accreditation of ITSEFs (Information Technology Security Evaluation Facility),
- Accreditation of Certification Bodies (CBs), and
- Authorisation of CBs and ITSEFs.

# When accreditation can make a difference

The Artificial Intelligence Act is a European regulation on AI – the first comprehensive regulation on AI by a major regulator anywhere.

The proposed regulation introduces a requirement for conformity assessment bodies to apply for notification to the relevant national authority. The application must include accreditation details, the AI systems they evaluate, and documentation proving compliance.

# When accreditation can make a difference

The European Commission is working on improving the **Ecodesign Directive 2009/125/EC**.

The aim is to make products on the EU market increasingly sustainable, by enabling far-reaching performance and information requirements – known as ‘ecodesign requirements’ – to be set on a wide range of them to **improve their circularity, energy performance, and other environmental sustainability aspects**.

The aim is also to align the regulation with the new legislative framework, and include accreditation according to Regulation 765/2008, notified bodies, conformity assessment procedures, and CE marking. Conformity assessment activities shall be related to product safety and sustainable criteria such as durability, reliability, and carbon footprint of the products.
